

GLNG UPSTREAM PROJECT

Client: Fluor | Duration: February 2012 – March 2014

Project Description

NPG Contracting was contracted on the GLNG Upstream Project to provide civil management, inspection and labour on the construction of the Hub04 Compressor Station and infrastructure including ponds and drainage structures. The project was delivered in South West Queensland during the CSG boom. NPG was engaged to deliver on a number of differing areas including:

- Construction Management
- Civil Quality Inspections
- Detailed Earthworks
- Drainage
- Concrete Foundations
- Weir Construction and Retention Structures
-

The project located in a remote location presented engineering specification compliance challenges that NPG found win-win solutions to drive costs lower whilst maintaining quality and design life requirements for the asset owner.
